

I am a volunteer reader for FM station WRRS of articles for print-impaired citizens in and around Wichita, KS. WRRS broadcasts on a sub channel of KMWU, a NPR station affiliated with Wichita State University.

I understand from my coordinator that KMWU will be converting to HD Radio by switching over from analog to digital broadcasting in the future. She informs me that when that happens WRRS will lose its sub channel unless your organization allows digital multiplexing such that WRRS can continue to broadcast a signal to its listeners.

I also understand that WRRS has modified some 3000 radios to allow their listeners to pick up the current signal. As a volunteer reader since 1992, I request that the FCC allow KMWU to provide WRRS the transmitting capability such that these 3000 individuals can live a better life through the service provided by WRRS.

I appreciate your consideration. Thank you,
